

Alstom introduces the Citadis X05 tram to Athens

A comfortable journey with ergonomic seats, larger windows and real-time passenger information

- **25 Citadis X05 trams** to be delivered to Athens
- A contract worth **€50 million**
- **2,700 Citadis** trams sold in **50 cities** worldwide
- **4 million passengers** carried per day worldwide

8 September 2020 – Alstom is proud to deliver the first two of the 25 Citadis X05 trams ordered by Attiko Metro, the urban transport authority of Athens, in July 2018. The tram will begin dynamic tests at the end of September before being put into passenger service in February 2021.

The 25 trams will run on the city's existing network, as well as on any planned extensions. The delivery of the last tram is expected by the end of May 2021.

"Alstom is proud to bring its latest generation of tram to Athens. By providing reliable and modern rolling stock, we commit to supporting the development of urban transport in Athens, to further increase the capacity and availability of the existing lines and their extensions," said **Stavros Vlachos, Managing Director Alstom Greece**.

"It is our duty to contribute to a more sustainable and green mobility in the city of Athens. We know how important it is for everyone to have the latest generation trams for improved, eco-friendly and more pleasant urban transport" said **Attiko Metro CEO Nikos Kouretas**.

In addition to the manufacturing and supply of the trams, Alstom is also responsible for the on-site testing, training and warranty services, as well as spare parts for the vehicles. These are Alstom's first trams sold in Greece, after the company provided 28 metro trains in early 2000 for the first Athens Metro project.

The modern Citadis X05 trams will supplement the existing fleet of light rail vehicles for use on the network in Athens and Piraeus. This latest generation from the Citadis range offers superior passenger experience, with 20% more glass surfaces, LEDs for soft, homogeneous lighting, large individual seats, and travel information on large screens via a telematic system. The five-section trams will be 33 metres long, with a capacity of 294 passengers. Double doors along the entire length of the tramway ensure enhanced accessibility.

The Citadis X05, the latest version of the Citadis range, boasts a number of new technologies, including permanent magnet motors for higher efficiency, as well as optimised HVAC (heating, ventilation and air-conditioning), which together reduce its energy consumption by 25%. Simplified sub-system integration and maintenance decrease lifecycle costs, while the tramway is 97% recyclable. To date, Citadis X05 has been sold in cities such as Sydney, Paris, Nice, Avignon, Caen, Lusail, Frankfurt and Athens.

2,700 vehicles of the Citadis range have been sold in 60 cities worldwide. Citadis trams have covered over 1 billion kilometres and transported 10 billion passengers since the first tram entered service in 2000.

About Alstom

Leading the way to greener and smarter mobility worldwide, Alstom develops and markets integrated systems that provide the sustainable foundations for the future of transportation. Alstom offers a complete range of equipment and services, from high-speed trains, metros, trams and e-buses to integrated systems, customised services, infrastructure, signalling and digital mobility solutions. Alstom recorded sales of €8.2 billion and booked orders of €9.9 billion in the 2019/20 fiscal year. Headquartered in France, Alstom is present in over 60 countries and employs 38,900 people.
