

Alstom designs, produces, supplies and supports innovative, safe, reliable and sustainable rail transport solutions, which comfortably transport millions of passengers and a large quantity of goods around the world every day where quality and safety are at the heart of all our actions to ensure the safety of passengers and third parties.

Confidence of Alstom Mastering Railway Safety is a given for our customers and the customers of our customers.

We are dedicated to developing, providing and maintaining products, systems, applications and services (including maintenance and operations) that are safe for their intended use.

As expressed by our CEO in the Sustainability and Corporate Social Responsibility Policy, everybody has an important contribution through the correct application of our processes and standards.

Our Leadership exemplify the behaviours and commitment to Railway Safety, and we count on the full engagement and support of all employees to fulfil their collective and personal responsibilities for Railway Safety.

Danny Di Perna
Executive Vice President
& Chief Operating Officer

Our commitment to railway safety

Design and implementation

- We design our products, systems, applications and services to achieve the required level of Safety based on applicable laws and regulations and internal processes compliant with applicable standards and codes of practices.
- We ensure that Railway Safety requirements are fully defined and fulfilled from development to delivery (including manufacturing and installation) of products, systems, applications and services
- We rely on robust Quality and Railway Safety processes to ensure that we, and our suppliers, deliver safe and compliant solutions to our customers in a sustainable manner

Demonstration and assessment

- We demonstrate safe products, systems, applications and services and independently assess them with impartiality.

Continuous improvement and promotion

- We share best practices and pro-actively analyse accidents, incidents and precursors to continuously improve Railway Safety.
- We deploy, maintain and continuously improve a Railway Safety Management System within our organisation to clearly define processes, roles, responsibilities, competency and training requirements. We promote awareness and a positive safety culture across the organisation.
